

Distributor Deep Dive — Glossary & Calculations

Prayag India Sales Intelligence — glossary, calculations & logic · generated 2026-08-01

Distributor Deep Dive Glossary

General & D1 (Retailer Lists)

- **Direct Dealer:** A retailer classified as a parallel branch in the supply chain, operating without a parent distributor. Distinguished by a blank 'Assigned Distributor' field in member working sheets.
- **Shared Distributor:** A retailer relationship where multiple distributors are assigned (comma-separated in the source). Modeled as a distinct relation.
- **None-Assigned (Mapping Problem):** Retailers with '--', '-', or '-' in the distributor field. Indicates a failure to map the retailer to a supply route.
- **NormKey:** A stable grouping key (e.g., 'TRADERS' -> 'TRADE') used to join member sheets and primary sales data.
- **Confirmed vs. Guessed:** Quality split for distributor totals based on name matching confidence.
- **Unassigned Correlation:** Pearson r correlation between a member's % of unassigned retailers and their achievement total.

D2 Flows (Primary vs. Secondary)

- **Primary In-Flow:** Goods Prayag sells to the distributor. Source: sale_line table (Net Amount).
- **Secondary Out-Flow:** Goods the distributor sells to retailers. Source: member_sheets (Order Booking) or secondary_register_line for closed years.
- **Flow Gap:** Primary Dispatch minus Secondary Out. A positive gap suggests stock building or outside-channel sales.
- **Primary OB:** Sum of primary_order_line.taxable_value, excluding 'Govt' channel institutional orders.
- **Pending Value:** Primary OB minus Primary Dispatch.
- **Fill Rate:** Primary Dispatch / Primary OB x 100.
- **YoY Growth:** Comparison of primary dispatch in closed months of the current FY vs. the same calendar months in the prior FY.

D3 SKU Spread

- **Brand Canon:** The finest product granularity (e.g., "CPVC DURALIFE").
- **Broad Segment:** One of 17 high-level categories (e.g., "WATER TANK", "CPVC").
- **Concentration HHI:** Herfindahl-Hirschman Index (0-10000) measuring brand diversity.
- **Cross-Sell Depth:** Average number of distinct brand canons sold per retailer.
- **Range Depth Whitespace:** Brands sold by peers in segments this distributor already operates in, but does not yet stock.
- **Lost Brand Whitespace:** Brands sold in the prior FY but absent in the current recent FY.
- **Peer Whitespace:** Brands sold by peers (same State Head) that this distributor does not sell.

D4 Investment, ROI & Tiering

- **Effective Discount:** Weighted average calculated as $(1 - \text{netTotal} / \text{grossTotal}) * 100$.
- **Anomalous Discount:** Lines where discount_pct > 100. These are excluded from weighted averages but flagged.
- **Cost to Serve:** Distributor Visits * Member Cost Per Visit.
- **Net-to-Cost Multiple:** Secondary Net Revenue / Visit Cost to Serve.
- **Tier (A/B/C):** Composite score (0-100) based on Net (30pts), Growth (25pts), Active Ratio (25pts), and Discount (20pts).
- **Visit Cadence:** Recommended frequency (A=Weekly, B=Fortnightly, C=Monthly).

D5 Whitespace & D7 Capacity

- **Coverage Gap:** District has retailers but NO distributor. Fix: Strategic appointment.
- **Assignment Gap:** District has a distributor but some retailers are unassigned. Fix: Admin mapping.
- **Channel Conflict:** Presence of Direct Dealers in a district that has a named Distributor.

- Capacity Shortfall: When Demanded Visits > Available Visits per month in a territory.

Calculations & Logic

D1: Retailer Aggregation

- Groupings: Retailers are grouped by normDistKey(Assigned_Distributor).
- Direct Dealer Logic: If field is empty -> directDealer. If field is --/- -> noneAssigned.
- Normalization: .toUpperCase(), replace TRADERS -> TRADE, ENTERPRISES -> ENTERPRISE, remove non-alphanumeric, collapse spaces.

D2: Flow Calculations

- Primary Dispatch: SUM(sale_line.amount) where version_status='current'.
- Secondary Out: SUM(RetailerRow.orderBooking) from working sheets.
- Days Since Last Order: Today - MAX(sale_line.invoiceDate).
- Growth %: ((Current Closed Months Dispatch - Prior Year Same Months Dispatch) / Prior) * 100.

D3: SKU Spread & Whitespace

- HHI: SUM((brand_net / total_net * 100)^2).
- Broad Segment Mapping: Keyword-based lookup (e.g., "TANK" -> "WATER TANK").
- Whitespace Ranking: range_depth (0) > lost_brand (1) > peer_whitespace (2). Within types, sorted by peerNet descending.

D4: Investment & Tiering

- Effective Discount: SUM(net_clean) / SUM(gross_total). net_clean uses net_amount if discount_pct <= 100, else gross_amount.
- Tier Scoring Rules:
 - Net: Top 40% (30), Mid (18), Bottom (8), None (8).
 - Growth: >5% (25), 0-5% (18), -10-0% (10), <-10% (5).
 - Active Ratio: >60% (25), 40-60% (18), <40% (8).
 - Discount: <40% (20), 40-50% (12), >50% (5).
- Tier Thresholds: A (>=70), B (45-69), C (<45).

D6: Customer Concentration

- Retained: This Year OB > 0 AND Last Year Sale > 0.
- Reactivated: This Year OB > 0 AND Last Year Sale = 0.
- At Risk: This Year OB = 0 AND Last Year Sale > 0.
- Never: This Year OB = 0 AND Last Year Sale = 0.

D7: Capacity Check

- Demanded Per Month: SUM(DistributorTier.cadenceRetailerPerMonth) where cadenceRetailerPerMonth = activeCount * TierRate.
- Tier Rates: A (2.0/mo), B (1.0/mo), C (0.5/mo).
- Available Per Month: Total YTD Member Visits / Months Elapsed.
- Shortfall: Demanded - Available (if > 0).
