Sales Deep Dive Glossary

Member KPIs (Headline Metrics)

- Primary Target (YTD): The target assigned for direct billing from company to distributor/dealer up to the current date.
- Secondary Target (YTD): The target for orders booked by the sales rep from retailers to distributors up to the current date.
- Order Booking (Secondary OB): Total value of secondary orders booked from retailers/parties (Net = Sub Total, excluding taxes).
- Direct Dealers Order (Primary OB): Value of orders booked directly from dealers, kept separate from retailer secondary OB.
- Sale (YTD Sales Received): Actual secondary sales revenue received/confirmed.
- Achievement %: Calculated as $(\text{Actual} / \text{Target})$. Several variants exist: Secondary (OB/Target), Direct Dealer (OB/Primary Target), and Sale (Sale/Total Target).
- CTC (Monthly/Annual): "Cost to Company" - the salary cost of the team member.
- T.A. Bill + Station Cost: YTD cumulative travel allowance and station expenses.
- Cost Ratio: The rep's total cost (Salary + TA) as a percentage of their Sales received.
- Total Visits (YTD): Cumulative count of all visits (retailer, distributor, direct dealer, leads) performed by the rep.

Retailer & Spread Metrics

- Active Retailer: A retailer who has placed at least one order ($\text{OB} > 0$) in the current fiscal year.
- Dormant Retailer: A retailer listed in the rep's working sheet who has zero orders ($\text{OB} = 0$) in the current fiscal year.
- Business Per Retailer: Average OB value per active retailer.
- Top 5/10 OB Share: The percentage of total OB contributed by the top 5 or 10 retailers (concentration measure).
- Concentration Index (HHI): Herfindahl-Hirschman Index for retailer OB; indicates how dependent a rep is on a few large customers.
- Cross-Sell Depth: Average number of distinct SKU segments (brands) sold per customer.

Visit Plan & Capacity

- Demonstrated Visits Per Day: Total visits done divided by working days elapsed in the data period.
- Annual Capacity Anchor: The total number of visits the rep successfully performed in the most recent closed fiscal year. Used as the realistic upper limit for future planning.
- Feasible Remaining Visits: $(\text{Annual Capacity Anchor}) - (\text{Visits Done YTD})$. The number of visits the rep is realistically capable of doing in the rest of the year.
- Visit Gap: $(\text{Feasible Remaining Visits}) - (\text{Remaining Visits Required to meet frequency targets})$. A negative gap indicates a capacity shortfall.

ROI & SKU Analysis

- Revenue-to-Cost Multiple: Total OB (or Sale) divided by Total Cost ($\text{CTC} + \text{TA}$). Indicates how many rupees of revenue are generated for every 1 rupee spent on the rep.
- Segment Coverage %: The percentage of all available product segments (brands) that the rep has successfully sold to at least one customer.
- Win-Back Lead: A retailer who did business in a prior FY but has no orders in the current FY and is missing from the current working sheet.

Calculations & Logic

Data Sources

1. State Head Dashboard ('Data' tab): Source for headline KPIs (Targets, CTC, TA, YTD Visits).
2. Secondary Order Booking Report (SOBR): Authority for the Sale figure, re-read directly to bypass Google Sheets ArrayFormula spill-cell lag.
3. Member Working Sheet ('Summary Report FY' tab): Source for retailer-level detail, business plans per retailer, and visit counts.
4. Secondary Register Line (DB Table): Source for historical performance, SKU/Segment spread (Phase 5), and win-back identification (Phase 6).

Key Formulas & Logic

- Net Value: All OB and Sale figures use Sub Total (net of taxes).
- Achievement %: $(\text{Actual} / \text{Target}) * 100$. Never read from sheet % cells; always recomputed using raw numerators and denominators.
- Cost Ratio %: $((\text{Monthly CTC} \text{ Elapsed Complete Months}) + \text{YTD TA Bill}) / \text{YTD Sale} \text{ } 100$.
- Elapsed Months: For Salary/Target pro-rating, only complete fiscal months are counted (e.g., if today is July 23, elapsed = 3: April, May, June).
- Visit Capacity Anchor: Priority is given to the most recent closed FY total visits. If no history exists, it projects the current Demonstrated Rate * 304 (total FY working days).
- Visit Gap: $(\text{Annual Anchor} - \text{Visits Done}) - (\text{Total Required} - \text{Visits Done})$.
- Forward Visit Plan:
 - Priority 1 (Maintain): Active retailers, sorted by OB.
 - Priority 2 (Develop): Dormant retailers with a distributor, sorted by Business Plan / Max(Distance KM, 5).
 - Priority 3 (Reduce): Retailers visited multiple times with zero OB (surfaced for frequency reduction).
- SKU Concentration (HHI): Sum of squares of segment share percentages. $\text{Sum}((\text{Segment Net} / \text{Total Net} * 100)^2)$.
- Win-Back Logic: Identifies customers in secondary_register_line (FY24-25, FY25-26) associated with the rep's normKey who are absent from the Summary Report tab of the rep's current working sheet.

Thresholds & Color Bands

- Achievement: Green $\geq 100\%$, Yellow $\geq 80\%$, Red $< 80\%$.
- Cost Ratio: Rep-specific, but generally flagged if exceeding 15% (sector dependent).
- Visit Gap: Red if negative (shortfall), Green if positive (surplus capacity).
- Concentration (HHI): > 2500 indicates high concentration (dependency risk).
